Patent Disclosure Statement

Dear Mr. Goode,

Attached is a list of patents and published patent applications that are, or may potentially be, considered to be essential to implement IPTV EPG Metadata standards being developed by ATIS' IPTV Interoperability Forum (IIF). LGE has filed, and may continue to file, continuations, continuations-in-part and other applications, in the U.S. and internationally, that may not yet be published and that are, or may potentially be, considered to be essential to implement IPTV EPG Metadata standards being developed by ATIS IIF. The claims, if any, that may be issued from patent applications are uncertain, and the specifications being developed by IIF continue to evolve. Hence, no assurance is provided as to whether any particular patent or patent application is, or may be considered to be, essential to the standards being developed. However, attention is called to the possibility that compliance with the proposed specification may require use of an invention covered by these or other patent rights of LGE.

In case part(s) or all of any proposals contained in contributions submitted by LGE, are included in specifications adopted and published as a standard for IPTV EPG Metadata and the included part(s)

contain items that have been patented or for which patent applications have been filed and whose use would be required to implement the ATIS IPTV EPG Metadata standards, LGE, is willing to negotiate licenses with other parties on fair, reasonable and non-discriminatory terms and conditions (under condition of reciprocity). The foregoing licensing declaration does not apply to (a) any portions of products or systems the purpose or function of which is not required for compliance with the ATIS IPTV EPG Metadata standards, or (b) enabling technologies that might be necessary to make or use a product but which are not set forth in the ATIS IPTV EPG Metadata Standards.

Very Truly Yours,

Saeng-Gyu Jeon, Vice President,  
Intellectual Property Center  
LG Electronics Inc.
